Hari Chandana Kedari

Frontend Developer | React.js | MERN Stack Developer

GitHub: HariChandanaVikas19 | LinkedIn: harichandanakedari | kedariharichandana@gmail.com | +91 9550371018

PROFESSIONAL SUMMARY

Frontend Developer with 1+ year of experience in React.js, TypeScript, and JavaScript (ES6+), expanding into Angular and the MERN stack (Node.js, Express.js, MongoDB). Skilled in component-driven development, REST API integration, JWT authentication, and performance optimization, with hands-on experience building EdTech-related applications. Adaptable, hands-on, and eager to take on frontend, full-stack, and cross-framework engineering challenges.

WORK EXPERIENCE

Associate Software Engineer — TestYantra Software Solutions *Mar 2025 - Jul 2026*

- Collaborated with a cross-functional team to build scalable, responsive web applications using React.js, TypeScript, JavaScript (ES6+), HTML5, and CSS3 with cross-browser compatibility; engineered 15+ reusable components using React Hooks to reduce code duplication.
- Implemented JWT token-based and role-based authentication with protected/private routes, and used Context API for global state management across applications.
- Integrated RESTful APIs using Axios and Fetch API with custom Axios instances for centralized error handling; optimized performance through lazy loading, code splitting, and memoization.
- Wrote and modified backend logic using Node.js and Express.js, including REST endpoints and MongoDB operations, to support frontend feature requirements.
- Contributed to EdTech-focused applications, including a Student-Trainer interface for course management and communication, and a coding practice module where students could view, attempt, and submit solutions to programming problems.

PROJECTS

EdTech Web Application (MERN Stack) — Github Link

- Developed a responsive React.js frontend for an EdTech platform, integrating with a MERN stack backend (Node.js, Express.js, MongoDB) via RESTful APIs.
- Implemented dual-role access (Admin/User) with course and bootcamp management, including full CRUD operations against the MongoDB-backed API.
- Implemented JWT-based authentication, custom React hooks for authentication logic, and Context API for managing global user and authentication state.
- Secured application pages using private/protected routes and centralized Axios-based API communication, including authenticated requests and error handling.

Expense Splitter App — Github Link

- Built a responsive React.js application for splitting group expenses among friends or roommates, allowing users to add expenses, assign shares, and track individual balances in real time.
- Implemented calculation logic to determine who owes whom and minimize the number of settlements needed within a group.
- Used React Hooks (useState, useEffect) and Context API to manage group, expense, and balance state across components.
- Designed a clean, intuitive UI for adding members, logging expenses, and viewing a running summary of balances.

TRAINING AND CERTIFICATIONS

Java Full Stack Development — Jspiders, Hyderabad *Oct 2024 - Mar 2025*

- Completed full-stack training covering HTML, CSS, JavaScript, React.js, Core Java, and SQL.
- Developed a React-based application implementing Hooks, dynamic routing, API integration, and CRUD functionality.

EDUCATION

Bachelor's Degree — Swarna Bharathi Institute of Science and Technology, Khammam *2020 - 2024*

CGPA: 7.31/10

Class 12th Intermediate (IPC) *2020*

9.1/10

Class 10th SSC *2018*

8.7/10

SKILLS

Core Frontend	HTML5, CSS3, JavaScript (ES6+), TypeScript, Responsive Design
React.js	Functional & Class Components, React Hooks, Context API, React Router (Dynamic & Nested), Custom Hooks, Private Routes
Angular	Components, Modules & Services, Dependency Injection, Angular Router, Ivy Engine (Angular 21)
Styling	CSS3, Bootstrap, Tailwind CSS, CSS Animations, Responsive Layouts
API & Async	REST API Integration, Axios, Fetch API, Axios Instance, AJAX, Promises, async/await, CRUD Operations
Auth	JWT Token-based Authentication, Role-based Access Control, Public & Private Routes
Backend (MERN)	Node.js, Express.js, MongoDB, RESTful API Design
Performance	Lazy Loading, Code Splitting, Memoization (useMemo, useCallback), DOM Optimization
Tools & Version Control	Git, GitHub
Mobile	React Native (View, ScrollView, Image, Routing – Basics)
